

TURBO-CLF® **For High Fouling Applications**

Extended Performance for Tube-Side Fouling

Turbo-CLF has been designed for condensing applications with fluids on the inside of the tube, like seawater, that tend to cause fouling. Condensers with a fouling liquid on the inside will have a drop off in performance over time due to fouling. Turbo-CLF has been engineered to extend the performance of a unit when tube-side fouling is a problem. The integral helical ridges on the inside of the tube have a two-fold purpose. The ridges increase the internal surface area and cause turbulence of the tube-side fouling. Independent research has confirmed that the ridge spacing and helix angle of Turbo-CLF will accomplish this task.

External Standards

This product is produced in alloy C12200 to meet the mechanical, chemical, and testing requirements of ASTM B75/B359 and in alloy C70600 to meet the mechanical, chemical, and testing requirements of ASTM B466/B359. For application to the ASME pressure vessel code, the product will be produced to meet the requirements of ASME SB75/SB359 for alloy C12200 and to SB466/SB359 for alloy C70600. Other applicable standards - DIN 1787, DIN 17671, DIN 17664, and ADW 6/2 WD TUV 420/5.

Plain Sections

Plain end and land of 1" (25.4 mm) and over are standard. For plain end and land lengths down to 5/8" (15.9 mm), contact the Wolverine Marketing Department. Spacing between lands of 18" (457.2 mm) and over are supplied as standard.

Lengths

Overall lengths, with power brush deburred ends, are supplied from 4' (1.219 m) to 60' (18.288 m) as standard. Overall lengths, with chamfered ends, can be supplied from 3' (0.914 m) to 28' (8.534 m) as standard lengths.

Temper

Turbo-CLF is supplied, as standards, in the "as finned" condition with plain ends and lands in the annealed condition. Material can be supplied in the annealed condition the entire length by special request.
